Human Life Cycle Stages of Human Life Cycle Science

Stages of Human Life Cycle . Stage 1 . Foetus in the womb . An egg from the mother is fertilised by a sperm from the father and turns into an embryo inside the mother s womb. At first this creation looks like a bundle of cells. By about eight weeks this bundle of cells gradually turns into the shape of the human body. This is called the foetus. The foetus totally depends on its mother as it cannot breathe, drink or eat by itself.
